Digital Color Concepts Uses Wind Energy to Power Their Printing Facility

[Mountainside, New Jersey, December, 2007] – Digital Color Concepts, a leader in printing and pre-press has announced its decision to utilize renewable, clean wind energy to power their printing facility. Digital Color Concepts believes it is their corporate responsibility to be environmentally conscious. Purchasing wind energy is Digital Color Concept’s latest green initiative.

As a lead commercial printer in the New York area, we realize how important it is to DCC and their client base to achieve environmentally and sustainability objectives. We hope that our green initiatives will inspire others to follow our lead.

DCC’s commitment to the environment will continue to be a major focus. We will continue to seek out sustainable initiatives that reduce our environmental impact.
